REGISTRATION FOR CREATION

THE DOOR MIRROR VIEWER

To this time around burglary are everywhere or criminals or intruders what ever they call themselves, those people who are not invited to your house. We need protection to those kind of people. Most apartments has DOOR VIEWER for safety.

I came to a better idea that for a better awareness of who are the people outside our door without peeking on to the little hole like the door viewer. My idea called THE DOOR MIRROR VIEWER.

Specification

This invention is called THE DOOR MIRROR VIEWER. The difference between the DOOR VIEWER to THE DOOR MIRROR VIEWER, the Door Viewer, you need to go to the door and peek on to the hole to see who were at the door, not everybody in the house can do that, especially the children, not only it's too high for them to reach and peek, they cannot easily recognize the person outside. So sometimes they end up opening the door anyway. It's not safe.

THE DOOR MIRROR VIEWER is safer and easier to anyone who lives in an apartment or in a house. The mirror size is about 20x20 cm. The electronic mirror works with battery which is connected to the LENS, easy to insulate to the door. We can see anyone who comes to the door approximately 2 meters before they reach the door. So we have time to call for help if it is an intruder or simply don't want to entertain anyone in your precious time, pretend you're not home.

It's more easier and safer for the children to recognize instantly the person outside their door. So they know when to open the door or not to open at all for their safety, these days all kinds of criminals are everywhere.
